

GoalLive

Building a platform for football game suggestions and bookings

Group Members:

- Nisheet Das (nisheetd)
- Himansh Mulchandani (hmulchan)
- Rhythm Dahiya (rdahiya)
- Sakhi Khanchandani (skhancha)

To setup:

- Install Conda (<https://www.anaconda.com/download/success>) (skip if already there).
- If you installed the dependencies in a virtual environment, activate the environment. Else use `conda create -n dfp_env python=3.11`
- Virtual environment can be activate using 'conda activate dfp_env' or 'source <env_name>/bin/activate'
- Install dependencies using `pip install -r requirements.txt`. This'll take care of all your dependencies.
- run the application using `streamlit run streamlit_app.py --theme.base="dark" 🚀`
- You might be asked to enter your email, skip that.

App Experience:

- Enter your email address and press fetch email
- It'll ask you to verify your email on the Google SSO Screen. Please verify
- Close the Google login screen. This completes the process of fetching the calendar.
- Now, press the fetch recommendations button. This steps takes about 15-20 seconds, Apologies in advance :)
- This'll help you find the possible football match with option to watch online or recommends restaurants at the bottom.
- If you're running the program towards the end of the day, you probably won't find any match.

For running in Debug mode (internal):

- Follow the setup steps
- Follow this for setup in Pycharm: <https://www.youtube.com/watch?v=IFAmwYZC3eA>
